

Doctor Appointment Scheduler

Objectives

- Create a digital platform enabling patients to find doctors and book appointments online.
- Allow doctors to manage their schedules, availability, and patient records.
- Reduce waiting times and streamline the healthcare appointment process.

Deliverables

- A fully functional Doctor Appointment Scheduler.
- Doctor directory with specialization, location, and availability filters.
- Appointment booking flow with time slot selection.
- Patient and doctor dashboards with upcoming and past appointments.
- Automated reminder notifications for appointments.

Requirements

- HTML: Structure the doctor listing, booking forms, and dashboards.
- CSS: Design a clean, trustworthy medical-themed interface.
- JavaScript: Handle real-time slot availability and dynamic form updates.
- Backend: Manage bookings, doctor schedules, and user authentication.
- Database: Store doctors, patients, appointments, and medical notes.

Advanced Features

- Telemedicine: Integrate video consultation for remote appointments.
- Prescription Management: Allow doctors to issue digital prescriptions.
- Medical History: Maintain a digital health record for each patient.
- Rating System: Let patients rate and review doctors post-appointment.
- Insurance Integration: Verify insurance eligibility at booking.
- Multi-Specialty Support: Organize doctors by department and specialty.
- Waitlist Feature: Automatically notify patients of cancellation slots.
- Calendar Sync: Sync appointments with Google/Outlook calendar.
- Mobile Responsiveness: Accessible on all devices and screen sizes.

- Admin Analytics: Appointment volumes, popular specialties, and doctor performance.
- Payment Gateway: Collect consultation fees online via Stripe before confirming an appointment.
- Auto-Refund on Cancellation: Automatically refund patients when a doctor cancels their appointment.

Co-Pay Collection: Calculate and charge the patient co-pay amount after insurance verification.
